Installation Instructions

Step 1 – Surface Preparation

- A** Clean up the surface from dirt or dust.

If the scheme coat of the wall is weak, chalking or peeling, we recommend to use the **Wall Sealer Pro** (Page 26).

- B** Measure the dimensions of wall.

- C** Ensure your wall surface is non-wavy, dry, and solid.

If your surface is too wavy for the panels to be applied in flatly, a wooden frame can be built as a backing for the panels.

Step 2 – Layout Planning

- A** Plan the panel layout.

- B** Some panels may need to be trimmed to fit your wall dimensions.

- C** Sand the trimmed part with sand paper and touch up with Archistra paint (Included).

! Ensure the whole part is coated & fully dried.

Step 3 – Panel Application

- A** Apply **construction adhesive** on the back of the panel and stick to the wall. Press and hold the panel a few seconds to ensure it is in place.

- B** Install the panels working from the bottom upwards. The use of a leveler is recommended.
